SPF Claims Fall Short For Many Sunscreens

According to a new study from Consumer Reports, 43 percent of sunscreen products do not live up to the sun protection factor (SPF) claims on their bottles.

Consumer Reports found that 13 out of the 35 sunscreen lotions tested had an SPF of less than 30, despite claiming to have at least an SPF of 30 on their labels. The majority of products that fell short on their SPF numbers did so by 10 to 15 points. However, some products were labeled as SPF 50, and were only found to have an SPF of 8.

The study found that sunscreens with active chemical ingredients like avobenzone and ecamsule performed better during testing than those with natural ingredients like zinc oxide.

For more information about the report and to see the top performers, click [here](#). To promote further sun protection, the American Academy of Dermatology encourages people to wear protective clothing when going outdoors and to stay in the shade when possible to reduce the risk of skin cancer.

FDA Moves to Regulate the Sale of E-cigarettes

When electronic cigarettes, or e-cigarettes, first entered the market, there were few rules regulating who they could be sold to and what warnings (if any) they must carry. In recent years, concerns about the safety of e-cigarettes has grown and many have criticized e-cigarette manufacturers for targeting teenagers with candy-like flavors like cookies and cream, chocolate and birthday cake.

On May 5, 2016, the Food and Drug Administration (FDA) announced that e-cigarettes and other tobacco products, like hookahs, will be regulated in the same way that traditional cigarettes are. Retailers will now be required to verify that all e-cigarette customers are at least 18 years old, and they will no longer be able to distribute free samples to customers.

Previously, there were no regulations about disclosing the ingredients in e-cigarettes. Under the new rule, all manufacturers will be required to list what is in their products. E-cigarettes must also now carry warnings that they contain the addictive substance, nicotine, and they must come in child-resistant packaging.

In addition, all e-cigarettes that went on sale after February 2007 must gain FDA approval. Considering the fact that the e-cigarette market was virtually non-existent before 2007, this means that every e-cigarette, as well as every flavor and nicotine level, will need to be approved. This could be a very time-intensive and expensive process for companies. E-cigarette manufacturers will have two years to gain FDA approval.

CALIFORNIA AVOCADO SUMMER WRAPS

- 1 ripe avocado, seeded, peeled and cut into chunks
- ½ cup plain nonfat Greek yogurt
- 1 tsp. lime juice
- ½ cup blueberries
- ½ cup carrots, grated
- ¼ cup red onion, chopped
- 2 cups fresh arugula, chopped
- 12 ounces cooked chicken breast, cubed
- 4 8-inch whole wheat tortillas

PREPARATION

Mash half of the avocado chunks with the yogurt and lime juice in a medium bowl. Add the remaining filling ingredients, including the rest of the avocado chunks; mix gently. Top each tortilla with ¼ of the filling mixture. Roll and tuck in the ends. Slice in half diagonally, securing with toothpicks if needed.

Food Labels to Get a Makeover

On May 23, 2016, the FDA announced that food labels will be getting an overhaul. The new food labels will now list how many added sugars are in each product and more clearly define what a serving size is. Many Americans are unaware of how much sugar is added to foods they wouldn't conventionally think of as sweet, like cereal, flavored yogurts and tomato soup. The FDA hopes that these new labels will help Americans better manage their diets.

The new labels will also use a bolder font to highlight the number of calories in each food, and labels will now include potassium and vitamin D levels—since studies have shown that many Americans are deficient in these areas.

Food labels will no longer be required to list vitamin C and A levels because deficiencies in these vitamins are now rare, according to the FDA. Calcium and iron amounts, though, will remain on the label.

Large food manufacturers will have two years to add the new labels to their products. Small manufacturers—those who generate less than \$10 million in sales a year—will have three years to adhere to new labeling requirements.

NEW FOOD LABEL

The diagram shows a nutrition label with several callouts pointing to specific changes:

- Serving: Larger bolder type** points to the 'Serving size' line.
- Serving sizes updated** points to the '8 servings per container' line.
- Calories: Larger type** points to the 'Calories 230' line.
- Updated daily values** points to the '% Daily Value' column.
- Actual amounts declared** points to the nutrient amounts in the table.
- New footnote** points to the asterisked footnote at the bottom.
- New: Added sugars** points to the 'Includes 10g Added Sugars' line.
- Change in nutrients required** points to the 'Vitamin D 2mcg' and 'Potassium 235mg' lines.
